

## Tyler Grove

I'm for green energy to combat climate change and if BESS is the right solution for that, I'm on board. However, we need to be careful, thoughtful, and intentional with the placement of these batteries.

They belong in commercial areas where fire departments are prepared and equipped to handle any situation. I'm deeply concerned about these going near schools, residential areas, and natural lands prone to wildfire.

Please keep these away from heavily populated areas. Transmission lines are feasible options to properly locate BESS and extend their reach.

Thank you,

Tyler Grove
