

Mark Edwards

Due to the potential environmental and citizen impacts these sites need to be a minimum of 50 miles from any densely populated areas. Financial impacts need to fall on the utilities installing these facilities. Failure in one site has far reaching negative impacts to biological inhabitants. Smaller distances cannot be allowed in any site in Washington state. Anything less the 50-mile limit puts the state and citizens at great risk of which the state will be liable. If one were to be sited closer than this to my community, the community would sue the state.
