Dustin FITCH

No city willingly allows these systems into place, but have the infrastructure to support if something goes wrong. These bess sites are targeted toward rural areas that can't afford the infrastructure to fight if something goes wrong, and don't have the money to fight putting them in. Aquifer, waterways, and civilian hazards should be enough to stop this madness. The potential damage to the environment, ecological disaster, and civilian risks should be enough to stop putting these in our communities. Imagine an entire farming community, river Aquifer, salmon run, and farming economy ruined by just one of these fires. It's not worth the risk
