

Paul Tabayoyon

In all presentations by Ecology done so far, there has been no mention of how much tax revenue the existing system of taxes has created per year. These funds should be used as the base capital for assisting the infrastructure build out, and ensure that locations are spread equally across ALL neighborhoods, not just poor overburdened communities where most of all state programming creates additional pollution, traffic congestion and degradation of traffic safety, and lack of addressing the local community safety concerns due to many governments being driven politically and no longer attempting to listen to community and siding on politics.

Please also include community listening sessions for creating locations so they are not decided by community governments who again do not apply development equally between wealthy and poor communities that exist together, but allow the community to decide using the funds that local governments are allowed to spend as part of their waste management systems, the most likely way the state will distribute the funds.
