

McKinley MacDoran

Hello,

Continued from 1,2,3 previous submissions.

If the PRO can please design plastic packaging bags to be reusable and resealable plastic bags instead of one-time vacuum sealed packaging.

Examples being cereal plastic packaging to be made into resealable bags and recycled after reuse.

The current design of the cereal plastic packaging are designed for a one-time open and users often have to fold the plastic bag for freshness and or buy other products to keep the bag closed; bag closer clips, rubber bands, etc. The cereal box and the plastic bag could be recycled.

Making plastic bags resealable will allow for better affordability and longevity (in theory) to the purchased product and potential for reuse of the plastic bag and then recycle the plastic bag after reuse.

The Ecology Department may want to consult with Box Tops for PRO packaging labeling for school funding on packaging and recyclables. <https://boxtops4education.com/>

Thank you.
