

Norma Serra

This is a comment related to the "Movements associated with other vessels" discussion. Recreational Vessel movements might be influenced by the presence of commercial whale watching vessels. Commercial whale watching vessels might attract recreational motorboats and sailboats when these vessels are stationary or moving at a very slow speeds as they might think there are watching whales and might be curious about it. At UVic we are doing some work to try to tackle this. Happy to discuss it further if interested. Best, Norma
