

## Marsha Hamacher

The Olympic Water and Sewer cleanup site at 781 Walker Way in Port Ludlow should absolutely remain on the Hazardous Sites List. As there are still contaminants in the soil under the structures and in the groundwater, this site is not yet cleaned up well enough. These contaminants can easily seep into the wells that we are using and/or are going to be using; if there is any need for ongoing monitoring of contamination at all, then this water that we depend on in this village is not as clean as it should be. There have been recent times where the water coming out of the tap just reeks. I have had to install two filters in my home to have useable water that didn't smell. This is not the quality that our village deserves. Please keep the site on the list!
