

M S

To Whom It May Concern:

Please Read in a Kind, Ethical, and Respectful Tone.

1. In the Senate Hearing The Devil They Knew Part III September 10, 2019 3M, Dupont, and Chemours stated that there are no PFAs Experts and request the Federal Government and Senate to please Regulate PFAs Chemicals. Who at the Federal Level is researching PFAs and getting Testing that meets Daubert Standards? These are supposed to be Federally Regulated Chemicals that need to be disposed at Military Radioactive Disposal Sites. Why are they in our National Water and Air? What documents are available from the Federal EPA, NIH, CDC and Senate and House Committees as of 2023?

2. Does the Department of Ecology have any Conflict's of Interest or Ethic's Disclosures? (the answer you are looking for is "YES")

3. Will the Department of Ecology get an Ethic's Advisor? Since they are trying to Regulate Chemicals/Physic Hazards that are no "Experts" and no Federal Scientific Standard for Testing Methods for Water and Air PFAs Pollution?

4. When will a Public Data Base be made that to links up Proprietary PFAs Chemicals back to Corporate Polluters to hold them Accountable for making Water/Air Toxic? What is the plan to make them pay for Clean Up of not properly disposing of their Proprietary Toxic Hazardous Chemicals Under CERLA? and "Failure to Warn"

5. How will Tax Paying Citizens be informed that they are Drinking Toxic Water and or Work Environment is Toxic?

6. How will this be billed back to the Polluting Companies?

7. Which Hospitals will be receiving Federal Funding for Scientific Detection and Documentation of PFAs Poisoning from Drinking Water and Breathing Air that is contaminated with Toxic Hazardous PFAs Chemcials that have no safe exposure rate. (At this moment There is no State of Federal: Public Health Training from Washington Department of Health, UW Medicine, Virginia Mason, and Everett Clinic do not have Training Protocols/ Doctors that are will to treat PFAs Chemicals Poisoning in humans.)

8. Is Washington State seeking Guaranteed Federal Funds from the NIH to monitor and get "Medicare For All" to make sure that Long Term Health Problems will not bankrupt exposed communities that have been impacted by Chemicals Poisoning.

9. Who is the Federal Contact for PFAs? Name, Agency, Date and Title.

10. What Federal Training is scheduled to being given?

11. What are the Federal Scientific Daubert Standard for measuring and correctly testing PFAs Contaminations? How will this be made public so affect communities have access.

12. The lifetime Safe Exposure Rate per Duponts Internal Worker Data is .01 PPB as of February 11, 2002. This is a 10 year safety stand at the Washington Works Plant and was relayed to EPA as of March 6th, 2002. (Most of the workers in these plants are sick/ dead and their illness was never correctly documented because lack of Federal Public Health Chronic Low Dose PFAs Poisoning Protocol)

There are over 5,000 PFAs and only 6 that are being monitored. PFAs where never correctly disclosed by TSCA requirements by Manufacture that continued to lie to Federal and State Regulators and the safety of the 5,000 may be questionable at best.

Sincerely,

Confidential Whistleblower
Tax Paying Citizen
