

Jack Martin

1-Is there a sunset clause where UnoCal is no longer required to pay for any additional soil removal if WSDOT decides to remove and install a new larger storm water line?

2-Is this a valid option regarding soil above the pipe. Can the storm line be anchored utilizing straps and pipe anchors into the soil? This option eliminates the need for a soil ballast on top of the pipe.

3-If EPA guidelines for soil contamination levels become more restrictive would UnoCal be responsible to meet those requirements?

Thank you.
