

## Coleman Byrnes

Please choose option PL5 for remedying the toxic problem at the site of the defunct Port Angeles Rayonier Mill . Removal of the residual toxic mill wastes is the only way to protect my community from their ill effects. It is the only way to protect salmon, orcas and other marine organisms from contacting these toxins. Removal of these waste materials will also clear ground for the re-establishment of the Ennis Creek estuary, which is a vital component of any Ennis Creek salmon restoration plan. Capping the toxic soil, as advocated by PL3, is not a real solution. This option leaves the Rayonier waste in my community. Toxic soil is not a problem that should be swept under the rug. Do the right thing! Mandate the removal of the toxins. Choose option PL5. Thank you.
