I support the permanent solution of Alternative SL-5 for contaminated soil and sediment at the former Rayonier Mill site in Port Angeles, WA.

Proposed Alternative SL-3, leaving contaminated soil in place forever in a capped mound is unacceptable. This would present a long term risk of future contamination from natural disasters and would greatly limit development opportunities that our town desperately needs. Port Angeles does not need to be stuck with a toxic waste dump. Rayonier is a profitable company. They can fully clean up their mess.
