

SCOTT WALKER

Why is the latest map of the affected area leaving out the original northern end of the map, specifically most of North Old Trails road? Many wells in this area have very high levels of PFAS, proven by the first round of private well testing. For example, our well contains over 35 times the "safe" level of PFAS.

Prior to redrawing the affected area map, we have received delivered bottled water, and a POU filter was installed last December. I want to make sure we, and our neighbors, are not excluded from future PFAS cleanup efforts and the eventual POET system installation.

Thanks,
Scott Walker
