A thorough Environmental Impact Study needs to be done. How can we take chances with our Native Salmon whose health is already compromised? We know how easily disease can be spread and the vulnerability of Native Fish and chances for farmed fish to escape and spread disease. Please protect our Native Salmon by doing what is best for them. Farmed Atlantic salmon are a threat to our Native Species! Please keep our Salmon safe for future generations and a healthy eco system. I do not eat farmed fish, as I believe it is unhealthy and I certainly do not want our Native Salmon under threat from them.
