

Louise Abbott

Please do not approve the recent application submitted by Cooke Aquaculture Pacific. Their track record clearly shows that their operations have caused substantial pollution of the waters of the Salish Sea as well as risks to water quality of the entire region. After years of hard work by many there have been gains in restoring the habitat that is so critical to the many species who depend on clean water. Approval of the permit would risk the hard won gains made to date. Farmed fish do NOT belong in Washington state.
