

James Tuck

I am making a formal comment on the variances that the WDOE is considering for the Spokane River. It is WDOE job to hold polluters responsible and to adhere to the Clean Water Act of 1972. Polluters need to be held accountable and therefore industrial dischargers that release dangerous toxins into the river should not be given a "pass" with a variance that can allow up to 5 times the legal limit! WDOE needs a cleanup plan that holds polluters responsible. WDOE's job is to protect the Spokane River to the highest standard possible.

Sincerely,

James E. Tuck
