

Jennifer Brock Olson

I am saddened that we are even entertaining the idea of variances. New laws with strict rules about what could be dumped into our rivers were established some time ago. Our planet is in crisis and the fact that you are even discussing variances is a sad statement on your care for our rivers and world. Variances are bad for our river. Variances are bad for the public and bad for our nation. Please, find your morals and prepare a real plan called a total maximum daily load that will mandate a pollution diet with limits on PCB toxics being dumped into our river.
