

## Lori Feagan

Variations are bad for our river, bad for our economy, bad for the public and bad for our nation. This is not 1960, it's 2020 and we understand the value of clean water and the health risks of loosening protections. There are negative impacts to local recreation, tourism, and business when industrial pollution fouls waterways. Please prepare a real plan that reflects the value of the Spokane River, including language for a total maximum daily load that will mandate a pollution diet with limits on PCB toxics being dumped into our river.
