

Joshua Abel

The Draft Environmental Impact Statement does not explore the impacts of stalling the timelines to meet state pollution standards.

The draft Environmental Impact Statement needs to address a "no discharge" alternative - explore the impacts of getting all pollution out of the Spokane River.

More actions are needed to reduce and remove PCB toxins from waste water needs to be inside the "Pollution Minimization Plans". These PMPs are a part of the variance applications. Many of the current plans are vague or do not go far enough.

Increase the reporting and accountability inside the variances. Every discharger should be mandated to finding and reporting-on the latest, developing technology to destroy toxics in their pollution discharge.
