

Alex Richardson

I don't support any variances that allow more pollutants into our river. The river is not even clean enough to eat from without the variances, and I think our biggest goal as the Spokane community should be to restore the water quality to a pristine condition. Allowing more pollution makes it very clear that we value the profits of a handful of businesses more than the lifestyle and health of the entire community. Please do not allow any variances to the current pollution regulations so we can continue cleaning up the Spokane River for the benefit of the entire community.
