Document	Page Number	Comment
Publication 20-10-035, Riparian Buffer Width Map link	48	I can't tell the difference between the 100ft buffer and the 75ft buffer. I recommend either making the 75ft buffer a different color/thickness or removing 100ft entirely, with just 75+, 50, and 35ft.
Publication 20-10-035, Stream type link	61	The link would be more effective if it went to the buffer widths required for each stream type. The list of definitions that the link goes to does not include stream type as a definition.
Publication 20-10-035, Figure 18	78	Wetlands difficult to see on map, consider revising.
Publication 20-10-035, Table 35	96-97	Significant adding error in subtotal for point source costs.
Publication 20-10-035	139, 145, 159	Broken links that say "Error! Reference Source Not Found."
