The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Claire Ramsey

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Judy Kushner

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

David Sickles

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Jennifer Kain

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Pamela Rains

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Steph Hart

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Jared Cornelia

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Susan Mathews

They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Steven Bulger

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Beth Stein

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Donna Delisi

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Lauren Jacobs

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Lindy Lyman

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the two proposed amendments to the Cruise MOU in Puget Sound, which I support wholeheartedly. The distinct Southern Resident Killer Whale population is at risk of extinction, and we must do everything to preserve as many of them as possible.

Distressingly, dumping of scrubber wash water by the cruise ships into affected waters in Washington State worsens threats to this wonderful species.

The warning signs for diminishing of the species are all too apparent. Already, only about one out of three births will survive to reproductive maturity. Diminishing salmon for food is putting outside stress on the population. Meanwhile, as they are stressed by hunger, the cruise industry only makes things worse.

Most of the scrubbers the cruise industry employs are the type with open loops that releases acidic water warmer than the surrounding sea water. Moreover, that water contains toxic materials, such as heavy metals, polycyclic aromatic hydrocarbons, suspended particulate matter, and nitrates. Every one of those produce significant harm in the marine environment and for the sea creatures that inhabit those waters. The Port of Seattle has banned the discharge of scrubber wash water while any ship is docked as of January 1, 2021. I support a ban on discharge of exhaust gas scrubber wash water from all scrubber types, including bleed off of sludge, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound in the MOU, in order to reflect Washington state's NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as human health from harmful pollutants in sewage from vessels.

For far too long, the cruise industry has polluted our environment, the air, the waters, and our climate in general. Unfortunately, shamefully, they choose repeatedly to put the health of the planet and all its inhabitants at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Christopher Hamilton

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Gary Reese

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Ellen Matheson

The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Daniel Smith

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

JoÃ«lle Pelegri

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Monique Soares

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Jane Collier

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Ludwig S. McIntyre II

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Teresa Fine

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Linda Neely

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

barbara svetkovich

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

susan johnson

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Susan Albow

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Maureen Koneval

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Krutik Patel

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Dennis Morton

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Marion Vittitow

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Rev. Maria Riter Wilson

Support Proposed 2021 Cruise MOU Amendments

"Evan Dobrowski

Department of Ecology; Water Quality Program

3190 160th Ave SE

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Harriet Rosas

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Carol Schaffer

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Kimberly Owens

The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Cruise industry must immediately stop dumping Scubber washwater that is warmer than Sea Water, all of which will be explained below. This is so harmful to all types of marine life. Or forbid Cruises in this area. Isn't there a (3) mile rule or Law that can be used. Regardless this act of washwater must be stopped.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Doreen Harwood

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Susan Wille

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Elizabeth Enright

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

frank briggs

Support Proposed 2021 Cruise MOU Amendments

"Evan Dobrowski

Department of Ecology; Water Quality Program

3190 160th Ave SE

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Patricia Harrison

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Peter Syre

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Lynn Ireland

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Carolyn Hahn-Re

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Peter Jurman

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Gerielle Gonzales

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Hannah Perkins

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Tiffany Staubach

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

STEPHANIE MIEHE

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Joan Colgrove

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Brad Duell

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Kaiya Garcia

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Jillana Laufer

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

D Hubenthal

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Joan Shea

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

J Esposito

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Emmanuel Avila

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.
