The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Jennifer Thornton

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

JH van Dijk

Support Proposed 2021 Cruise MOU Amendments

"Evan Dobrowski

Department of Ecology; Water Quality Program

3190 160th Ave SE

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Rich Rollins

The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Diane George

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Tom Walsh

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Carol Jamison

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Wendy Pratt

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Martha Vandervoort

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Debbie Lewis

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Zulma Castaneda

The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Joshua Stamberg

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Randy Hauserman

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Penny Potter

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Ellen Boyle

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Eleanore Vann

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

John Iavarone

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

CATHERINE PERRIZO

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas, and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Helena de Vengoechea Rudd

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Lisa Nardi

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Brenda Agnew

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Michele B

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Mary Larsen

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Kathy Keith

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Steve Hamlin

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Vicki Woolley

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Paul Kim

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Laurie Pierce

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alar Hum bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Margaret Powell

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Maria Celano

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Stephen Powell

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Dave Cowen

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Dallas Reed

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Nancy Denbo

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Keith D'Alessandro

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Harry Richey

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Sarah Hunnewell

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Bradley Cox

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Mari LoNano

The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Lawrence Bogolub

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Ross Lockridge

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

borith im

Support Proposed 2021 Cruise MOU Amendments

"Evan Dobrowski

Department of Ecology; Water Quality Program

3190 160th Ave SE

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Annemiek van der Corput

The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Tim Crowley

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Frank Smith

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Lori Lester

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

ALLEN LIEBERMAN

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

brigitte brigitte

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Dr. and Mrs. Cregg McCullin

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Kimberly Vaz

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Denise Garin

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

T Reading

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Merle Sine

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Carlotta Sailer

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

Subject: Support Proposed 2021 Cruise MOU Amendments

I strongly support the proposed amendments to the Cruise MOU for Puget Sound.

As you know, the Southern Resident Killer Whales are at serious risk. We need your help to prevent the cruise industry dumping its scrubber washwater into MOU waters in Washington State. The washwater exacerbates the threats to this species. Currently, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Kimberly Miracle

Support Proposed 2021 Cruise MOU Amendments

"Evan Dobrowski

Department of Ecology; Water Quality Program

3190 160th Ave SE

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Holly Bevagna

The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Dave Pierot

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

Those stinking cruise ships should have been stopped completely a very long time ago.... I'm a 60-year resident of WA State and have been watching those worthless junk ships polluting our waters for decades! STOP THEM!

Thank you.

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

mattie Goodwin

Bellevue, WA 98008

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Amy Sherwood

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Marge Heggison

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.

Over the years, cruise companies have polluted our air, water, and climate. They have repeatedly made choices that put the health of the planet at risk. Please implement both of the proposed amendments to the cruise MOU for the sake of endangered orcas and our environment.

Thank you.

Sincerely,

Norman Petrik

Subject: Support Proposed 2021 Cruise MOU Amendments

Thank you for the proposed amendments to the Cruise MOU in Puget Sound. I strongly support the two proposed amendments to the Cruise MOU.

The Southern Resident Killer Whales are at serious risk. The cruise industry dumping its scrubber washwater into MOU waters in Washington State is exacerbating the threats to this iconic species. The warning signs for this species are sounding the alarm bells, only one in three survive birth. They are starving with lack of salmon. They are stressed and hungry, and the cruise industry is only making matters worse.

The significant majority of scrubbers used by the cruise industry are open-loop and emit acidic washwater that is warmer than ambient sea water and contains heavy metals, PAHs, suspended particulate matter, and nitrates, all of which are very harmful to the marine environment and the marine creatures that inhabit it. The Port of Seattle has banned the discharge of scrubber washwater while any ship is docked as of January 1, 2021 and I support the implementation of a ban on the discharge of exhaust gas scrubber washwater from all scrubber types, including bleed off or sludges, in MOU waters.

I also support the amendment proposed by the Department of Ecology to incorporate the Vessel Sewage No Discharge Zone (NDZ) for Puget Sound into the MOU to reflect the Washington state NDZ regulation. The NDZ protects Puget Sound, orcas and other marine mammals, as well as protecting human health from the harmful pollutants in sewage from vessels.
