

Katherine Hutchins

Pollution scrubber waste **MUST NOT** be permitted in the coastal waters of Washington State in general but mostly in the Seattle area.

All the scrubbers are doing is converting air pollution into water pollution and dumping wastewater straight into the ocean. The scrubber system be **BANNED**, as should all air and water pollution.

In high traffic inlets like Puget Sound, the build up of scrubber dumping is compounding the already polluted water and has serious implications for endangered species like the Orca whale.

We must help to keep our air, water and land healthy for us and future generations.
