Toxic fossil fuel wastewater is ending up in the ocean because of a device called a "scrubber." Although scrubbers have been touted by the cruise industry as a solution for treating toxic ship engine exhaust, in reality, all it does is convert air pollution into water pollution and dump this fossil fuel combustion wastewater straight into the ocean. In high traffic inlets like Puget Sound, the build up of scrubber dumping is compounding and has serious implications on endangered species like killer whales. The time has come to ban scrubbers and secure permanent protection for Puget Sound and its ecosystem. WE only have one earth. Let's protect it.
