

Gail Yborra

Although scrubbers have been touted by the cruise industry as a solution for treating toxic ship engine exhaust, in reality, all it does is convert air pollution into water pollution and dump this fossil fuel combustion wastewater straight into the ocean. In high traffic inlets like Puget Sound, the build up of scrubber dumping is compounding and has serious implications on endangered species like killer whales.

But we have an opportunity to ban scrubbers and secure permanent protection for Puget Sound and its ecosystem. Do the right thing to protection marine life and the ecosystem of Puget Sound.
