

Elizabeth Davy

Fossil fuel wastewater ends up in the ocean(!) due to a device called a "scrubber." While scrubbers have been touted by the cruise industry as a solution for treating toxic ship engine exhaust, in reality, all it does is convert air pollution INTO water pollution and dump this wastewater straight into the ocean. WHY is this legal?!?

In high traffic inlets like Puget Sound, the build up of scrubber dumping is compounding and has serious implications on endangered species like killer whales.

This must not continue!
