

Susan Rodriguez

We all know the meaning of poison and toxic, so why then would you allow them to be put into our water? This is insanity. Is it because we can't see with our eyes what the consequences are? Until it kills the creatures living in that water? Don't allow this to happen. You in charge should be protecting our waters and the lives that must be sustained within them. Do your job. Stop allowing the release of poisons and toxic wastes.
