

Tessa Rife

Toxic fossil fuel wastewater enters our earth's precious ocean habitats through use of scrubbers. Although scrubbers have been touted by the cruise industry as a solution for treating toxic ship engine exhaust, in reality, all it does is convert air pollution into water pollution and dump this fossil fuel combustion wastewater straight into the ocean. In high traffic inlets like Puget Sound, the build up of scrubber dumping is compounding and has serious implications on endangered species like killer whales. I am writing to express my concern for the health of our oceans habitats and wildlife and request that use of scrubbers be banned.

Thank you for your time and consideration,

Tessa Rife
