

## Patricia Flood

The cruise ship industry is one of the dirtiest modes of transportation. They use heavily pollution diesel fuel to power the ship. So many of them have been fined for illegally dumping the human and food waste overboard. It's no wonder they're pétri dishes of disease.

The scrubbers they use to catch some of the emissions from their smokestacks, are washed out in port. All of the toxic chemicals that are prevented from going into the aire, are now being dumped back into the ocean. This harms the fish who life near the sites when they do this. No cruise ship should be in the water unless they use higher grade fuel with more efficient scrubbers. Laws need to be passed that they have one chance. If they screw up, they should lose their licence until the can consistently
