

Ed Kenney

I am requesting that the Department of Ecology no longer allow the spreading of biosolids, sewage sludge or septage over critical recharge areas. This practice has contaminated groundwater resources in the recent past. Also, some large waste hauling firms have blended listed hazardous waste in with their biosolids for over twenty years and top Ecology officials claim not to know about this practice. I believe that this practice and the Department of Ecology's current oversight represent a clear and present danger to Washington State citizens
