- Take caution not to open attachments or links unless you know the sender AND were expecting the attachment or the link Nutrient General Permit Lead Ellie Ott, Ecology has known for more than 20 years that sewage plants are causing unsafe levels of pollution. Puget Sound is in serious decline and Ecology's proposed blanket permit for the 58 sewage treatment plants does nothing to address the problem. Both federal and state law require that Ecology act with real solutions, ones that are already in place in other areas of the country. Please heed the science and take the needed steps to limit/eliminate the nitrogen discharge from the sewage treatment plants throughout the Puget Sound area.
