Very disappointed to see after all of the meetings, workshops, time put in on following Ecology and the Preliminary Draft Permit that the Action Levels changed by a reduction of 6000 lbs/year from the Preliminary Draft to the Draft. I feel this is dishonest and puts everyone into a trigger instantly. Laboratory additional costs per year for our plant is \$12,000. The Permit contradicts itself continuously. We are a smaller plant so \$12,000 in additional costs is above the "5% of Operational Budget." I noticed the bigger treatment plants with the most influences on the Puget Sound are permit for numerous millions of lbs. loading per year. Wow. Good job people.
