

J & K Dairy

Hi, this is Jason Sheehan. I'm a dairyman and farmer and permit holder in Eastern Washington. Just a couple of quick points um the T Some 200 has not been scientifically proven to support the way that the the climate is in Eastern Washington. I'd like the ecology to look closer at the T some 100 which was a more appropriate fit scientifically in Eastern Washington. 00:07:24 Jason Sheehan Also, the post harvest date for soil samples of October 1st needs to be actually moved back to allow us to finish harvesting from Washington and then apply nutrients from plant to winter crop. 00:07:36 Jason Sheehan Right now, especially the late fall, most of us are not able to finish harvest by the 1st of October, so a date of first of November would be much more appropriate. 00:07:46 Jason Sheehan Beyond that, that's enough for comments. Thank you.
