

## Pamela Gray

You can do better. I live near the perpetually toxic Anderson Lake in Jefferson Co. The cause of the annual lethal toxic algal bloom is previously contaminated groundwater. Other county lakes are also starting to show this annual toxic algal bloom, to the extent that they are no longer safe for swimming (and like Anderson Lake, kill unfortunate dogs that drink from them) You need to clean up your past mistakes before allowing new ones. Stop being so irresponsible and do your job without compromises to BIG AG. They can do a better job dealing with dairy filth, and if it raises the price of milk, so what? Food prices are undergoing extreme inflation anyway. It won't be noticeable in the economic chaos we are experiencing. We need clean water more than milk!
