

## Thomas Sexton

A description and function of a surface skimmer may be useful at first mention for those unfamiliar with its utility.

Defining site potential tree height at first use on top of page 10d (or maybe including a list of acronyms for this chapter as was done with other chapters would be greatly helpful)

Duplicate word: "water watering systems" in middle of page 12d

The same list of these watering systems is shown both on page 12d as well as on 180d - this may be intentional as a reminder, just double checking.

For this chapter as well as others, it is my opinion that readability would be improved by moving appendix B: Implementation considerations above citations and the annotated bibliography. (however, I understand formatting restrictions may make be restricting this).

Overall, a very nice read and well put together.
