

Local government- City of Bothell

For the SSC program, we appreciate this requirement is allowed outside of the SMAP area.

The current calculations needed to establish points has been very problematic for Phase I jurisdictions, so we ask that Ecology find a better way to quantify the point calculation to allow cities to implement important smaller projects on the neighborhood scale.

For retrofitting existing systems, we appreciate the discussion regarding the inability to bring an existing system up to current standards. We have several ponds, for example, that would greatly benefit from additional flow control and/or water quality treatment that will not be able to be brought up to current design due to site constraints.
