

Alice Cords

This comment is related to the Phase II Western WA Municipal Stormwater Draft Permit. We are a secondary permittee. There is a concern about the timing of being required to submit the updated Stormwater Management Plan at the same time of year as the annual report is due. There are many other regulatory reporting requirements around that same time of year, and adding one more would be a strain on staff resources. The current system of having that document updated by May 31st annually works well for our staffing resources. Please consider keeping the deadline the same as it is right now.
