

John Marshall

What information or runoff studies informed Ecology's decision that light rail discharges are pollution generating and require enhanced treatment? Show me the data!

Will Ecology issue Sound Transit an individual NPDES permit requiring monitoring maintenance and retrofit responsibilities for their regional transportation system (similar to WSDOT individual permit)?

Sound Transit must begin an aggressive retrofit program to address treatment for all of the existing (and currently in construction) tracks that were installed without any treatment, much of which discharges into salmon-bearing waters.
