## Volume III

For Continuous Simulation Model Please consider Autodesk's Storm and Sanitary Analysis as APPROVED, as it is included in every Civil 3D installation and is a very good tool that greatly facilitates design back and forth from modeling to plans. It has built-in rainfall data by County and can also do custom hydrographs for any given time-series storm event. This fits well with Washington's Equity initiative, as this is one less piece of software a small business has to purchase, it integrates well with AutoCAD, and allows design to progress more rapidly.
