

Jeanne S Peters

I live in Spokane & many years visiting Soap Lake I am writing in support of Soap Lake's designation as an Outstanding Resource Water - Tier III(B)., Soap Lake has unique, mineral-rich water created by the geology of the region concentrating the minerals in the water and the mud., This is a regionally unique recreational value and destination for healing nature of water. Used since pre-historic times to heal and rejuvenate people living here., The layers of water that do not mix in Soap Lake. This is unique. The chemically stratified layer of naturally formed meromictic lakes ... has evolved uniquely adapted species., This unique habitat that is a rare example of its kind with bacteria only found in this lake. Researchers with Montana State University have been awarded a series of grants totalling \$6.4 million to identify ways algae can be used for biofuels and other products as it removes carbon dioxide from the air. In addition to other research being conducted on the water and mud in the lake., Helping keep the lake healthy will help the economy of Soap Lake. The minerals keep the water from excess forming toxic algae.

Dear Department of Ecology We don't want anymore degradation in the lake, we would like the water quality to remain the same with pollutants deterred, the lake is a great recreational place for Grant county and actually people come here from even far away places for healing. When walking into the lake it seems clean and the base is sandy for quite a ways before reaching the muddy nutrient base which many apply to their skin. I have witnessed it clearing psoriasis first hand. Also, I have felt the benefits of soaking for my joints, skin, & overall wellness. Jeanne Peters
