What does one think we will be drinking if we poison our own waters? They are our responsibility to maintain them = keep them from contamination = thus not only safe for our lives but for those who live in them and everywhere else. It's not rocket science. I'm writing in support of the proposed Outstanding Resource Waters designations for the upper watershed of the Cascade River, the upper watershed of the Green River, and the Napeequa River. These areas are valuable natural resources that deserve to be protected. From helping local economies to providing safe drinking water, these waters are critical to quality of life in our state, and I firmly believe they merit Outstanding Resource Water designation. I believe that future generations will greatly benefit from this Outstanding Resource Water Designation. Natural resources are critical to local communities' quality of life, and I know that protecting these waters will only further strengthen our local communities and economies. Thank you for your consideration.
