

Leslie Taylor

I am sharing a youtube link to a recording made at a Science Conference held in Soap Lake in 2002 by Doug Sutherland, the Washington State Commissioner of Public Lands.

Doug addresses the unique habitat that is a rare example of its kind with bacteria only found in this lake. Researchers have been awarded a series of grants totaling \$6.4 million to identify ways algae can be used for biofuels and other products as it removes carbon dioxide from the air. This is in addition to other research being conducted on the water and mud in the lake.

...little tiny lake, very rare. But what we can learn from this lake is enormous and could have and may have a significant impact on the quality of life of the people of the world, not just the people of Grant County or Soap Lake. Truly very important. So we need to learn more about it we need to understand its implications of what happens around it and what happens in and are we indeed using it to receive the greatest benefit not only on the short term but on long-term...
