

Kris McCall

Ecology has not disclosed environmental impacts – good or bad.

Please wait on the rulemaking until the environmental impacts of these designations are disclosed. Ecology is required by the State Environmental Policy Act (SEPA) to disclose impacts on land and shoreline use. Yet its SEPA decision does not acknowledge that the designation would likely prevent roads and public access for human activities adjacent to these waters. It also does not discuss potential impacts on forest management practices to prevent or fight catastrophic wildfires.
