

## Gordon Iverson

I attended your presentation in Mount Vernon and have followed the outstanding water designation. I do have some familiarity with Cascade river But my comments would apply to other rivers. Cascade river has several layers of Protection . These include wilderness area national bark wild and cynic rivers And state forest practice rules. And the information I have seen there Was no descriptiof what Additional designation would accomplish. No information was provided Is regarding a baseline study Current conditions In the watershed.

The designation Should be cancewe're at least delayed until a baseline study has been completed and a clear definition of the future desired condition has been selected.

Thank you

Gordon Iverson
