

Ruthann Tobiason

I live part time in Soap Lake and part time in Snohomish. I also serve on the Friends of the Lower Grand Coulee board, as well as the creative district planning committee I am writing in support of Soap Lake's designation as an Outstanding Resource Water - Tier III(B)., Soap Lake has unique, mineral-rich water created by the geology of the region concentrating the minerals in the water and the mud., This is a regionally unique recreational value and destination for healing nature of water. Used since pre-historic times to heal and rejuvenate people living here., The layers of water that do not mix in Soap Lake. This is unique. The chemically stratified layer of naturally formed meromictic lakes ... has evolved uniquely adapted species., This unique habitat that is a rare example of its kind with bacteria only found in this lake. Researchers with Montana State University have been awarded a series of grants totalling \$6.4 million to identify ways algae can be used for biofuels and other products as it removes carbon dioxide from the air. In addition to other research being conducted on the water and mud in the lake., Helping keep the lake healthy will help the economy of Soap Lake. The minerals keep the water from excess forming toxic algae. Soap Lake is extraordinary and the existence of this lake has defined the cultural and historical heritage of the community. It's the "anchor" that makes this community like no other. The loss of the lakes unique qualities would have a devastatingly negative impact on the local economy.
