

Debbie Stempf

I'm writing to encourage you to implement strong measures in the wastewater discharge permit for the Everett Wastewater Treatment Plant that will be effective in reducing harmful discharges of PBDEs, PFAS, and nutrient pollution. Wastewater treatment plants are a primary source of these pollutants. In Puget Sound, high levels of PBDEs have been found in salmon, orcas, and also in human breast milk. PFAS and nutrient pollution are pervasive nationwide, including in our beloved waterways. How we can allow these sorts of discharges from one of our Washington wastewater treatment plants is beyond me. Please work to rectify this situation. Thank you.
