

Karen O'Donnell

I am an avid sailor, kayaker, and I crab out of the harbor. And as well fish outside ediz for salmon when I can get friends to take me on their boats. I understand that there is funding from the federal government using our the citizens tax dollars. I pay exorbitant taxes to live here. I chose to live here for the pristine environment. And I rely on fish and crab to help me survive with such high prices. And as well I enjoy the activity of acquiring fish and crab. It is healthful and wholesome activity. I'm shocked that a state with strict environmental protection laws would believe the preposterous concept of taking pollution from the air processing it (and using fuels to do so) and then pumping it into our harbor after it is heated up and the ph is changed to alkaline!! Surely there was some payoff!! And this IS FASCISM!! It is not left or right it is government colluding and being bribed by corrupt corporations and businesses to oppress the people, and steal resources. What is so infuriating is using the tax money already pilfered to fund a project to destroy our environment while under the guise of environmental clean up or improvement! This will kill the crab! And fish! And most like promote the growth of harmful bacteria, and algae!! I absolutely oppose this despotic, corrupt, environmentally destructive attempt to pilfer tax dollars through grants feigning environmental protection! This is infuriating! Stop now! Don't allow this destruction of our sea life! Don't create a toxic water in our harbor!
