

# Dean Olson

Hello and hope this Memorial Day weekend helps us remember the fallen vets who fought for freedoms that we might be losing today,

Please consider the non-point source (NPS) pollution along 104 from the hill top going west and north to the ferry. I wish that NPS runoff might be collected to preserve both the east side of 104 and the west side of 104. Currently, along the east side, there are broken concrete barriers and much garbage left.

If there could be a plan to remove the road, elevate it and remove all the decades of NPS pollution, that would help the wetlands a lot. I also would like to see how we can restore the wetlands so we can remove the asphalt (from 104 to the train tracks, up to Dayton St), so that the wetlands are restored up to Dayton Street, with the elevated roadways that go to the ferry booths.

In this email, I used my 'political' email ID. I look at that one daily, but it keeps the SPAM away from my main email (just saying).

Thank you,

D
