

## Dara Osborne

As a municipality, we have several sand and gravel permittees within our city limits. One of our permittees was audited back in 2019 and several noncompliance issues were noted in their report. As of 9/4/25 these issues have not been implemented or revised and the facility's noncompliance affects the municipality's stormwater permit compliance now as well. What is the best solution for bringing out of compliance facilities into compliance with their sand and gravel permit which includes a stormwater pollution prevention plan that has been approved but is not adequately followed or enforced? Is there any avenue that Ecology has to bring these type of sites into compliance?
