

Paul Majer

I have begun paying attention to issues with the extremely low water level of lake sawyer and it is extremely concerning. Ive lived on lake sawyer since 2014 and have never seen such extremely low water levels. Covington waters excuses seemed extremely biased and false across the board and will only hurt everyone in the region from residents to wild life and plant life. Please don't allow the Covington water to use politics to win out when everyone knows that the reason the water levels are low is because they started to pump water from the area to sell to another city, they may have the rights to the water but will they be held accountable for the damages occurred in the area from the downstream effects caused by low water levels on sawyer from feeding the rivers. Please make them stop taking the water from the area and prevent them from lowering the lake that all parties know they are doing. Thank you for your time
